# A BREAKTHROUGH IN TIMELESS ELEGANCE

---

TILES | FRACTURE

The MONN Fracture range promises all the benefits of a modular carpet tile, presenting it in a new and updated way. Perfectly suited to the modern corporate space, the design is an amalgamation, with fragments scattered and reorganised into linear strips. Non-conformist and dynamic, MONN Fracture offers stain resistant, high traffic carpeting that will elevate your work space and inspire new thinking.

Brilliant craftsmanship utilising stitch shift technology and Infinity yarn controls renders a carpet tile that holds its own both aesthetically and through rugged durability testing.

MONN MSix™ fibres are extruded onsite and engineered to achieve maximum durability with MONN Fracture surpassing set standards with excellent commercial use traffic ratings, resilience, and colour fastness.

MONN Fracture encompasses a range of neutral and cool greys, across an inclusive price range. The modular nature of the slender carpet planks combined with striking coloured accent tiles allow the floorspace to be broken up into various sections, creating movement and dynamic solutions.

## PERFORMANCE AND BENEFITS

The slender plank-like modules of MONN Fracture allow for a variety of laying patterns and different colours from the same range can be used to create borders or zones within a single space. The modular system also allows for easy replacement of individual tiles that may get damaged or worn over time.

Compared to laminates and hard flooring systems, Fracture provides superior comfort and sound insulation, while also enhancing indoor air quality by trapping dust particles.

## COLOUR SELECTION

Choosing the ideal colour for the required application, in terms of traffic and use, is important to ensure the long-term appearance and serviceability of your MONN Fracture floor. Consult our experienced sales representatives for advice on the best colour for your project.

## INSTALLATION

Installation is critical in ensuring that the full potential of your MONN Fracture floor is realised. Fitting should be done by specialist contractors who install according to SANS 10186:2010. Installation guides are included with each box of MONN Fracture.

## STAIN RESISTANCE

MONN Fracture is made from MSix™, a nylon 6 yarn extruded on-site and engineered to achieve maximum durability. This 100% solution-dyed nylon pile surface has superior colour fastness and stain resistance, ensuring MONN Fracture retains its original appearance for longer.

All MONN Fracture modules have been pre-washed, increasing resistance to traffic-related soiling.

## MAINTENANCE

The effectiveness of any cleaning programme depends on careful supervision and the correct use of the right equipment. Consider a maintenance programme in accordance with SANS 10245:2008. Regular vacuuming and quick spill clean-up are the most effective and economical ways of maintaining your MONN Fracture floor. Comprehensive maintenance guides are readily available from our sales offices and online at [www.monn.co.za](http://www.monn.co.za).
