

MONN®

STRADA

DYNAMIC TEXTURE AND GRAPHIC ACCENTS

MONN Strada - A contemporary range of loose-lay tufted tiles with dynamic texture and graphic accents. MONN Strada's multi-directional design, and range of colours, allow for a multitude of laying patterns to invigorate the eye and capture the imagination.

The range is available in six colourways, which are inspired by textured road surfaces, and vary from a light cement grey to a rich, tar-like, black. These are complimented by six intense

accent colours, that allow for zoning, bordering as well as endless possibilities in terms of pattern creation.

MONN Strada soft flooring provides excellent sound insulation and improved air quality thanks to its dust-capturing capabilities, making it highly suitable for commercial use. The solution-dyed Aquafil Nylon 6 fibre provides excellent durability and colour fastness, and ensures the longevity of Strada floors.

PERFORMANCE AND BENEFITS

A contemporary range of loose-lay tufted tiles with dynamic texture and graphic accents. MONN Strada's linear design and broad colour range allow for a multitude of laying patterns, which can be used to delineate different zones or walkways in order to accentuate certain spaces.

The modular system also allows for easy replacement of individual tiles that may get damaged or worn over time. Compared to laminates and hard flooring systems, Strada provides superior comfort and sound insulation, while also enhancing indoor air quality by trapping dust particles

COLOUR SELECTION

Choosing the ideal colour for the required application, in terms of traffic and use, is important to ensure the long-term appearance and serviceability of your MONN Strada floor. Consult our experienced sales representatives for advice on the best colour for your project.

STAIN RESISTANCE

MONN Strada is made from Aquafil Alto Chroma Nylon-6. This 100% solution-dyed nylon pile surface has superior colour fastness and stain resistance, ensuring MONN Strada retains its original appearance for longer. All MONN Strada modules have been pre-washed, increasing resistance to traffic-related soiling.

MAINTENANCE

The effectiveness of any cleaning programme depends on careful supervision and the correct use of the right equipment. Consider a maintenance programme in accordance with SANS 10245:2008. Regular vacuuming and quick spill clean-up are the most effective and economical ways of maintaining your MONN Strada floor. Comprehensive maintenance guides are readily available from our sales offices and online at www.monn.co.za.

INSTALLATION

Installation is critical in ensuring that the full potential of your MONN Strada floor is realised. Fitting should be done by specialist contractors who install according to SANS 10186:2010. Installation guides are included with each box of MONN Strada.
